(as required by Article 31 of the Town and Country Planning
(Development Management Procedure) (England) Order 2010)

Hampshire Minerals and Waste Core Strategy DPD 2007

DC2 - Sites with International and National Designations

Minerals and waste development, which is likely to prejudice the purpose of the following designated sites and their settings, will not be permitted unless the reasons for development outweigh the likely adverse impact, taking into account the requirements of relevant legislation and guidance. Internationally Designated Sites: European Sites (Special Protection Areas, proposed Special Protection Areas, Special Areas of Conservation, proposed Special Areas of Conservation) and Ramsar sites (Wetlands of International Importance); Nationally Designated Sites: The New Forest National Park, the proposed South Downs National Park and Areas of Outstanding Natural Beauty; National Nature Reserves, Sites of Special Scientific Interest; Scheduled Ancient Monuments; Listed Buildings, and sites on the National Register of Parks and Gardens of Special Historic Interest; Registered Battlefields. In all cases, applications will be subject to the most rigorous examination.

DC3 - Impact on Landscape and Townscape

Minerals and waste development will only be permitted if due regard is given to the likely visual impact of the proposed development and its impact on, and the need to maintain and enhance, the distinctive character of the landscape or townscape. If necessary, additional design, landscaping, planting and screening, including planting in advance of the commencement of the development, should be proposed.

DC6 – Highways

Major mineral extractions, landfills and 'strategic' recycling, aggregate processing and recovery and treatment facilities, will be permitted provided they have a suitable access to and/or route to the minerals and waste lorry route as illustrated on the Key Diagram. In all cases, minerals and waste development will only be permitted if it pays due regard to the likely volume and nature of traffic that would be generated by the proposal and the suitability of the proposed access to the site and of the road network that would be affected. Consideration should be given to highway capacity, road and pedestrian safety, congestion and environmental impact, and whether any highway improvements are required and whether these could be carried out satisfactorily without causing unacceptable environmental impact.
