(Development Management Procedure) (England) Order 2010)

Hampshire Minerals and Waste Core Strategy DPD 2007

DC1 - Sustainable Minerals and Waste Development

Minerals and waste developments will only be permitted if they meet the standards outlined in Policy S1 and, in appropriate circumstances, are designed and constructed to use water and energy efficiently.

DC3 - Impact on Landscape and Townscape

Minerals and waste development will only be permitted if due regard is given to the likely visual impact of the proposed development and its impact on, and the need to maintain and enhance, the distinctive character of the landscape or townscape. If necessary, additional design, landscaping, planting and screening, including planting in advance of the commencement of the development, should be proposed.

DC6 – Highways

Major mineral extractions, landfills and ‘strategic’ recycling, aggregate processing and recovery and treatment facilities, will be permitted provided they have a suitable access to and/or route to the minerals and waste lorry route as illustrated on the Key Diagram. In all cases, minerals and waste development will only be permitted if it pays due regard to the likely volume and nature of traffic that would be generated by the proposal and the suitability of the proposed access to the site and of the road network that would be affected. Consideration should be given to highway capacity, road and pedestrian safety, congestion and environmental impact, and whether any highway improvements are required and whether these could be carried out satisfactorily without causing unacceptable environmental impact.

DC8 - Pollution, health, quality of life and amenity

Minerals and waste development will only be permitted if due regard is given to the pollution and amenity impacts on the residents and users of the locality and there is unlikely to be an unacceptable impact on health and/or the quality of life of occupants of nearby dwellings and other sensitive properties. Where necessary minerals and waste developments should include mitigation measures, such as buffer zones between the site and such properties.

DC12 - Restoration and Aftercare

Mineral extraction, landfill and other appropriate developments will not be permitted unless there is satisfactory provision for the restoration of the site, within a reasonable timescale, for an after use consistent with the general planning objectives of the area. The restoration and after care of sites should seek to meet two or more of the following planning objectives:

- a. Improving public access to the countryside, including public access for disabled people and recreation;
- b. Use for management of water resources and/or flooding management;
- c. The improvement of biodiversity;
- d. Use as back-up grazing;
- e. Return to agriculture, forestry or other ‘open’ use recreational facilities.

Annexe to Reasons for Conditions
(as required by Article 31 of the Town and Country Planning
(Development Management Procedure) (England) Order 2010)

Proposals for mineral extraction and landfill must include provision for at least five years of aftercare following restoration of the site.

Restoration proposals for mineral workings in Aerodrome Safeguarding Zones should take account of the need for progressive working and restoration, to prevent open water bodies becoming bird roosts

DC15 - Sand and Gravel

Sand and gravel extraction will be permitted, provided the site:

- a. Is identified for sand and gravel extraction in the Hampshire Minerals Plan or pending its adoption, is within the Mineral Resource Area shown on the Key Diagram, or
- b. The proposed development involves a small-scale extension to or deepening of an active sand and gravel extraction site, and
- c. Hampshire's landbank indicates there is a need for sand and gravel which cannot reasonably be met from identified sites and locations and it can be shown that working such land would be equally acceptable to working within an identified site or location, and
- d. Is not within or would not have an unacceptable impact upon the New Forest National Park, the proposed South Downs National Park or Areas of Outstanding Natural Beauty, and
- e. The proposals include restoration opportunities for increasing biodiversity or access to public open space, or help to meet other planning objectives, and
- f. Where necessary, proposals for landscaping and planting (prior to operation) are included, and
- g. Is close to, and with good access to, the minerals and waste lorry route illustrated on the Key Diagram.

S1 - Sustainable Design, Construction and Demolition

New built development should facilitate the efficient use of resources through:

- a. Designs and layouts that allow the effective sorting, recycling and composting of waste;
- b. Design principles and construction methods that minimise primary aggregate use and encourage the use of high-quality building materials made from recycled and secondary sources;
- c. Construction and demolition methods that minimise waste production and re-use/recycle materials, as far as practicable on-site.
