HAMPSHIRE MINERALS AND WASTE CORE STRATEGY DPD 2007

Policy DC3 – Impact on Landscape and Townscape

Minerals and waste development will only be permitted if due regard is given to the likely visual impact of the proposed development and its impact on, and the need to maintain and enhance, the distinctive character of the landscape or townscape. If necessary, additional design, landscaping, planting and screening, including planting in advance of the commencement of the development, should be proposed.

DC6 – Highways

Major mineral extractions, landfills and ‘strategic’ recycling, aggregate processing and recovery and treatment facilities, will be permitted provided they have a suitable access to and/or route to the minerals and waste lorry route as illustrated on the Key Diagram.

In all cases, minerals and waste development will only be permitted if it pays due regard to the likely volume and nature of traffic that would be generated by the proposal and the suitability of the proposed access to the site and of the road network that would be affected. Consideration should be given to highway capacity, road and pedestrian safety, congestion and environmental impact, and whether any highway improvements are required and whether these could be carried out satisfactorily without causing unacceptable environmental impact.

DC8 – Pollution, Health, Quality of Life and Amenity

Minerals and waste development will only be permitted if due regard is given to the pollution and amenity impacts on the residents and users of the locality and there is unlikely to be an unacceptable impact on health and/or the quality of life of occupants of nearby dwellings and other sensitive properties. Where necessary minerals and waste developments should include mitigation measures, such as buffer zones between the site and such properties.

DC13 – Waste Management and Recycling (including Aggregate Recycling Facilities)

Waste management developments (excluding landfill) will be permitted provided that the site:

- a) Is identified as a site, or within an area suitable for waste management uses, in the Hampshire Waste Management Plan or Minerals Plan, or
- b) Re-uses/redevelops previously developed land and/or redundant agricultural and forestry buildings (including their curtilages), or
- c) Is on employment land, preferably co-located with complementary activities, and
- d) Has good access to, the minerals and waste lorry route as shown on the Key Diagram, and where possible, the site enables the use of waterborne and rail freight, and

**Annexe to Reasons for Conditions
(as required by Article 22 of the Town and Country Planning
(General Procedure) Order 1995 – as amended)**

- e) In the case of recovery and treatment sites, incoming waste shall be subject to pre-treatment, either on or off site to maximise the potential for recycling, and where technically possible, energy will be generated and used and the by-products, including heat, will be reused or recycled, and
- f) In the case of sites providing public access, the site shall be accessible for use by disabled people.

WINCHESTER DISTRICT LOCAL PLAN REVIEW (2006)

CE18 – Existing lawful employment uses

Within existing lawful employment sites in the countryside (Use classes B1, B2 and B8), the extensions or replacement of existing buildings will be permitted where:

- (i) the site is close to an existing settlement and main transport networks (including public transport) and not in a location where continued employment use would be harmful to the local environmental or neighbouring uses;
- (ii) there will be no material increase in employment or traffic levels as a result of any increase in floorspace or built development;
- (iii) the scale and design of the proposed buildings and the site achieved substantial environmental benefits that reflect local distinctiveness and the character of the surrounding countryside.

Applicants should submit a comprehensive plan justifying their requirements, demonstrating how the proposed development meets the above criteria, and how the natural features of the site are to be managed.
