(as required by Article 31 of the Town and Country Planning
(Development Management Procedure) (England) Order 2010)

Hampshire Minerals and Waste Core Strategy DPD 2007

DC3 – Impact on Landscape and Townscape

Minerals and waste development will only be permitted if due regard is given to the likely visual impact of the proposed development and its impact on, and the need to maintain and enhance, the distinctive character of the landscape or townscape. If necessary, additional design, landscaping, planting and screening, including planting in advance of the commencement of the development should be proposed.

DC6 – Highways

Major mineral extractions, landfills and ‘strategic’ recycling, aggregate processing and recovery and treatment facilities, will be permitted provided they have suitable access to and/or route to the minerals and waste lorry route as illustrated on the Key Diagram.

In all cases, minerals and waste development will only be permitted if it pays due regard to the likely volume and nature of traffic that would be generated by the proposal and the suitability of the proposed access to the site and of the road network that would be affected. Consideration should be given to highway capacity, road and pedestrian safety, congestion and environmental impact, and whether any highway improvements are required and whether these could be carried out satisfactorily without causing environmental impact.

DC8 – Pollution, health, quality of life and amenity

Minerals and waste development will only be permitted if due regard is given to the pollution and amenity impacts on the residents and users of the locality and there is unlikely to be an unacceptable impact on health and/or the quality of life of occupants of nearby dwellings and other sensitive properties. Where necessary minerals and waste developments should include mitigation measures, such as buffer zones between the site and such properties.

DC22 – Additional Plant, Buildings and Minor Development

Additional plant, buildings and minor developments at active minerals and waste sites, or the exploration of minerals (except oil and gas), will be permitted provided, where appropriate, they do not extend the timescale for completion of the development, they are ancillary to the operation of the site or they provide for the co-location of complementary minerals and waste activities.
